Mechanicam vero duplarem Veteres constituerunt: Rationalem quae per Demonstrationes accurate procedit, & Practicam. Ad practicam spectant Artes omnes Manuales, a quibus utique Mechanica nomen mutuata est. Cum autem Artifices parum accurate operari soleant, fit ut Mechanica omnis a Geometria ita distinguatur, ut quicquid accuratum sit ad Geometriam referatur, quicquid minus accuratum ad Mechanicam. Attamen errores non sunt Artis sed Artificum. Qui minus accurate operatur, imperfectior est Mechanicus, & si quis accuratissime operari posset, hic foret Mechanicus omnium perfectissimus.

NEWTON

La généralité que j'embrasse, au lieu d'éblouir nos lumières, nous décoverra plutôt les véritables loix de la Nature dans tout leur éclat, & on y trouvera des raisons encore plus fortes, d'en admirer la beauté & la simplicité.

EULER

... ut proinde his paucis consideratis tota haec materia redacta sit ad puram Geometriam, quod in physicis & mechanicis unice desideratum.

LEIBNIZ

The ARCHIVE FOR RATIONAL MECHANICS AND ANALYSIS nourishes the discipline of mechanics as a deductive, mathematical science in the classical tradition and promotes pure analysis, particularly in contexts of application. Its purpose is to give rapid and full publication to researches of exceptional moment, depth, and permanence.

Each memoir must meet a standard of rigor set by the best work in its field. Contributions must consist largely in original research; on occasion, an expository paper may be invited.

English, French, German, Italian, and Latin are the languages of the Archive. Authors are urged to write clearly and well, avoiding an excessively condensed or crabbed style.

Manuscripts intended for the Archive should be submitted to an appropriate member of the Editorial Board.

CONTENTS OF VOLUME 22

	<i>Page</i>
BACKUS, GEORGE E.: Potentials for Tangent Tensor Fields on Spheroids	210
BOHL, E.: Eigenwertaufgaben bei monotonen Operatoren und Fehlerabschätzungen für Operatorgleichungen	313
BOWEN, R. M., see WANG, C.-C.	79
COLEMAN, B. D., J. M. GREENBERG & M. E. GURTIN: Waves in Materials with Memory. V. On the Amplitude of Acceleration Waves and Mild Discontinuities	333
CONLAN, J., & G. N. TRYTTEN: Pointwise Bounds in the Cauchy Problem for Elliptic Systems of Partial Differential Equations	143
DANIEL, D. J.: Nonlinear Stability of the Boussinesq Equations by the Method of Energy	163
DAY, A., see VARLEY, E.	253
EDELSTEIN, W. S.: Existence of Solutions to the Displacement Problem for Quasistatic Viscoelasticity	121
EDMUND, D. E.: Asymptotic Behavior of Solutions of the Navier-Stokes Equations	15
GREENBERG, J. M., see COLEMAN, B. D., & M. E. GURTIN	333
GURTIN, M. E., see COLEMAN, B. D., & J. M. GREENBERG	333
HERRERA, I.: Riemann Representation Method in Viscoelasticity. I. Characterization and Construction of the Riemann Function. Solution of Problems with Prescribed Body Forces	270
HUCKEMANN, F.: On Schiffer's Variational Lemma	310
JOHNSON, W. E.: A Boundary Value Problem from the Theory of Magneto-Hydrodynamic Flow	355
JUBERG, R. K.: A Generalization of a Result of Tihonov	153
KNOWLES, J. K., & E. STERNBERG: On Saint-Venant's Principle and the Torsion of Solids of Revolution	100
LEE, R.: The Motion of a Self-excited Asymmetric Rigid Body	129
MEYER, R. E.: An Asymptotic Method for a Singular Hyperbolic Equation .	185
NITSCHE, J. C. C.: The General Maximum Principle and Removable Singularities – A Counterexample	22

ROGAK, E. D.: A Mixed Problem for the Wave Equation in a Time Dependent Domain	24
SATHER, J.: The Existence of a Global Classical Solution of the Initial-Boundary Value Problem for $\square u + u^3 = f$	292
SCHOBER, G. E., see WARSCHAWSKI, S. E.	201
SHAMPINE, L. F.: Note on a Paper of Bailey and Waltman	308
